SUMMARY

Leveraging a dual background in Software Engineering and UX/UI Design, I specialize in bridging the gap between creative concepts and executable code. My core strength lies in crafting user-centric interfaces that are not only visually compelling but technically feasible and implementation-ready. I bring value by delivering high-fidelity designs that optimize user experience while streamlining the collaboration workflow between design and development teams, ensuring a seamless transition from prototype to production.

EDUCATION

FPT Polytechnic, Ho Chi Minh City
Bachelor's Degree in Graphic Design / UI/UX Design | Graduated: Oct 2025

Mindx Technology
Certificate: UI UX Design Career Kickstart, UI UX Design Intensive
Introduction to UIUX Design, UX Design Basics | Graduated: Feb 2026

EXPERIENCE

UI/UX Designer, Murror AI Dec 2025 - Feb 2026
AI-powered mental wellness application focused on journaling and mood tracking.

- **Project Scope & Process:** Collaborated within a cross-functional team of 4. Led the end-to-end design lifecycle (UX Research, Wireframing, Usability Testing, UI Design) and delivered clear design specifications for seamless developer handoff.
- Redesigned the Home page and established a scalable Design System, optimizing the user flow and reducing cognitive load for daily emotional tracking.
- Integrated gamification mechanics and a reward-based streak system based on behavioral psychology research to build daily user habits, increasing curiosity and engagement.
- Implemented automated personalized journeys utilizing daily mood survey data, successfully boosting user retention by 15% and Daily Active Users (DAU) by 25%, while reducing drop-off rates by 30% (validated through unmoderated testing with 25 beta users over a 3-week tracking period).

UI/UX Designer, InkLab Tattoo Oct 2025 - Nov 2025
AI & AR-integrated platform enabling users to generate and virtually preview custom tattoo designs on their skin.

- **Project Scope & Process:** Worked in a core team of 4. Bridged the gap between technical AR constraints and user experience by driving the research phase, creating rapid prototypes, and establishing clear communication channels with engineering.
- Spearheaded UX/UI research for AR integration, designing a modern, intuitive interface that successfully guided users from AI generation to AR try-on. Achieved an 84/100 System Usability Scale (SUS) score, with 81% of users successfully interacting with the AR feature during moderated usability testing with 12 target participants in a controlled environment
- Streamlined the tattoo discovery user flow by incorporating AI-chat for custom generation, enabling 72% of users to finalize a design within 10 minutes and reducing overall discovery time by ~60% compared to traditional search methods.
- Enhanced user decision-making and reduced post-purchase regret through the AR Tattoo Preview feature, which increased user confidence by 68% prior to committing to a real tattoo.

SKILLS

User Research, Wireframing, Rapid Prototyping, Usability Testing, Game UI/ HUD, Design System, Information Architecture, Behavioral Psychology.

TOOLS

Figma, Adobe XD, Sketch, Principle, Photoshop, Illustrator, Confluence, Jira, Framer, Suite, Dovetail,FigJam
